WONDER 3.0

The high-performing software system for the technical and commercial management of wind farms

SCADA-Management

- Storage and analysis of operational data (across a variety of manufacturers)
- Life cycle documentation
- Support of RDS-PP

Real-Time Data

- Control center functionality
- Integration via IEC 61400-25, OPC and systems of third-party manufacturers

Watchdog and Logbook

- Monitoring of plant and system condition
- Recording of tasks and activities
- Provision of availability predictions

System Solutions

- Integration in system infrastructure
- Open data interfaces
- Direct marketing
- ERP-systems
- Reporting solutions

The WindGuard software system WONDER is already in use for more than 3000 plants worldwide. Its continuous development benefits from the scientific and technological expertise of the entire WindGuard group.
